PROFILE

Data professional with over four years of experience in analytics and programming, specialising in data pipelines, automation, and predictive modelling using Python (Pandas, NumPy, SciPy, scikit-learn). Strong background in SQL and ETL development, with hands-on experience in data visualisation using Looker, Power BI, and Tableau. Experienced in analysing complex datasets and delivering clear, actionable insights through statistical analysis and business-focused reporting.

WORK EXPERIENCE

Small and Medium Enterprise Development Bank of Thailand, THAILAND

Data Analyst / Analytics Engineer2025 - PRESENT

- Delivered end-to-end analytics solutions covering **data extraction, validation, analysis, dashboarding, and reporting**.
- Built data validation frameworks to ensure data accuracy, consistency and integrity across multiple systems.
- Gathered business requirements** and delivered reporting solutions for core banking operations.
- Supported Bank of Thailand projects (e.g. RDT Credit, TFRS9, etc.), ensuring accurate data mapping across systems.
- Developed automated data pipelines using Python, DuckDB, and Airflow, reducing manual reporting effort and improving turnaround time.
- Optimised SQL queries and data models to support complex financial and regulatory reporting.
- Analysed incident and defect data to identify trends, root causes, and recurring operational issues.

Central JD Co. Ltd., THAILAND

Marketing Analytics Specialist2021 - 2023

- Analysed marketing and performance data to support business and client decision-making
- Supported customer segmentation, campaign optimisation, cross-selling, and loyalty initiatives
- Built and **automated ETL pipelines** using **Python** and **Jenkins** on **Google Cloud Platform (Cloud SQL)**
- Developed forecasting models for budget and performance planning
- Created KPI dashboards and reports using **Looker Studio**
- Provided analytics and technical data support to stakeholders

Brain-Computer Interface Laboratory, THAILAND

Research Assistant2019 - 2021

- Conducted experiments and validated biological signal data for analytical accuracy
- Developed consumer preference models using **EEG** and **eye-tracking data**
- Applied feature extraction and signal processing techniques using **MATLAB**
- Built ECG signal detection and validation frameworks using **Python**

SKILLS

- Programming:** Python (Pandas, NumPy, Seaborn, SciPy, Scikit-learn), SQL, Java, MATLAB
- Databases:** Microsoft SQL Server, PostgreSQL, MySQL
- Data Visualization:** Looker Studio, Power BI, Tableau
- Analytics Platforms:** Google Analytics, Google Tag Manager, AppsFlyer Analytics
